Exercise E2 Conversions: Speed, Energy, and Power

1. A vehicle speed of $80.00~{\rm {km}\over{h}}$ in ${\rm {m}\over{s}}$

Solution

Fast Solution

\begin{align*} v &= 80.00~{\rm {km}\over{h}} = {{80'000~m}\over{3'600~s}} = 80~{\rm {m}\over{3.6~s}} \\ &= 22.22~{\rm {m}\over{s}} \end{align*}

\begin{align*} v &= 80.00~{\rm {km}\over{h}} = {{80'000~m}\over{3'600~s}} = 80~{\rm {m}\over{3.6~s}} \\ &= 22.22~{\rm {m}\over{s}} \end{align*}

\begin{align*} W &= 1~{\rm kWh} = 1~{\rm kW} \cdot 1~{\rm h} = 1~{\rm kW} \cdot 24~{\rm h} = 24~{\rm kWh} \\ &= 24~{\rm kWh} \cdot {{1'000~{\rm Wh}}\over{1~{\rm kWh}}} \cdot {{3'600~{\rm s}}\over{1~{\rm h}}} = 86'400'000~{\rm Ws} \\ &= 86'400'000~{\rm Ws} \cdot {{1~{\rm J}}\over{1~{\rm Ws}}} = 86'400'000~{\rm J
