Op-Amp zero adjustment without feedback

Build the following circuit in [figure 1](#) with the power supply and a multimeter.

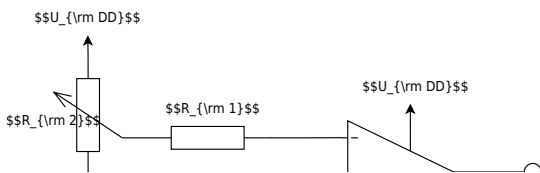

Fig. 1: Zero adjustment

$$U_{DD} = 10V, U_{SS} = -10V, R_1 = 10k\Omega, R_2 = 10k\Omega$$

Adjust the output of the Op-Amp to zero and describe your results.

$\{\rm \dots\}$

How can the circuit be improved?
Draw an improved version and explain it.
